

## Integrated QuickBooks Solution

Some of the versions supported by Fi-Soft's QuickBooks solution. Also supported are 2005-2007 versions.

USA ePay and its QuickBooks partner, Fi-Soft, provides several integrated solutions designed to extend the capability of your QuickBooks accounting software.

Fi-Soft offers a complete line of integrated payment processing solutions for QuickBooks. Process credit cards and checks while automatically integrating them seamlessly within QuickBooks. Our solutions offer you the ability to choose your own merchant account provider, or use one of our nationally known merchant account partners so that you obtain the lowest rates and best service.

Many businesses struggle with getting essential data from manual processes, varied software programs, and remote employees. The result? Lost data, poor customer service, and management decisions based upon inaccurate customer and financial data.

The solution? Implementing an integrated accounting system solution from Fi-Soft. By integrating your accounting system with your business processes and other programs, you can dramatically improve the effectiveness and profitability of your business. Imagine the impact on your business of eliminating manual processes, connecting remote employees, and having accurate customer and financial information automatically updated within your accounting system. Would your business run more efficiently? Will this generate higher profits? We think the answer is an emphatic "YES!"

## Why It Works

Fi-Soft Merchant Edition was developed by financial and accounting software professionals to provide businesses an easy-to-use method of integrating their payment processing and accounting systems. Some key elements :

- Program is easy to use and is working in minutes.
- Guaranteed compatibility and automatic data integration with QuickBooks® accounting software.
- Dedicated Fi-Soft product support from experienced consultants that are also Certified QuickBooks ProAdvisors®.
- Full featured solution – process credit card, e-check, e-mail, and company branded web payment page transactions.

## Security

All transactions being processed through the QuickBooks software are 100% secure. When the software sends out the transactions from the software to the USA ePay gateway it passes all the data through a secure socket layer (SSL) which ensure that all data is properly encrypted and that it can not get compromised. The software itself also never stores any credit card data; all data is stored securely on the gateway. This makes the software PCI DSS Compliant so you never have to worry about your QuickBooks processing being up to Visa / MasterCard standards.
